CHARACTERISTICS

OPERATIONAL CONTINUITY	PAY FOR USE	LOW LATENCY

8 Data Centers in Chile, Peru and Colombia with Tier III and Leed Gold certifications

- Node in Miami to connect your operation with the most important markets globally.

- Public and private clouds with permanent monitoring and high speed rings.

- Flexible and scalable offer, where you pay only what you use.

- Your DATA travels through our submarine fiber optic cable more than 2,000 meters deep.

- Hiring of a quantity of processing, memory and storage resources, which are distributed according to the request for virtual machines made by the client

- The service includes housing in the Data Center and the electricity supply for the correct operation of the servers

gtd CLOUD
una nube a tu medida

BENEFITS

Global Public Cloud
Quick access to multiple computing services on a global, ubiquitous architecture and under a flexible consumption model.

Local Public Cloud
All the benefits of the global public cloud, but on a local architecture, where data sovereignty is essential.

Dedicated Private Cloud
Fast access to multiple computing services on a local architecture, distributed to satisfy the most demanding service levels.
